

Best Use Suggestions Letter: Coat Moisturizers

The trigger sprayer is ready to replace the bottle cap on your new RH bottle. Before use, **twist open the nozzle valve (Liter) or switch the lock (16oz)** that your trigger sprayer may have.

Adjust the stream setting of a twist-nozzle: the nozzle can be, and arrives to you, closed. The stream is a *direct-line jet* when the valve is open wide. A broad-output stream happens between these two twist-nozzle settings. For the ideal output of product, twist your nozzle between closed and the direct jet stream setting.

Keep your bottles out of heat. Keep your bottles out of direct sun. Store bottles at room temperature or a temperature controlled area. Leaving Coat Moisturizers in the sun, exposing them to too much heat, or fluctuating its temperature often may degrade the solution, damage the ingredients, and make the formula less effective. Discoloration, spoilage, and formula corruption can happen in extreme heat.

Application Suggestions:

Reflexion Horse Coat Moisturizers use natural gums for their luxury formula and can separate after long periods of rest (top foam). Before using, give your bottle a good shake (the formula inside your bottle may “explode”, science-magic style). (Some separation is normal. Oil separation is normal; gum separation is normal. Gum should shake into the formula easily.)

Application of Reflexion Horse products is generally safe but avoid spraying Coat Moisturizers directly into body openings like the eyes, nose, and ears. Coat Moisturizers have been pH balanced for the Equus Caballus hair and skin.

Strength and Shine: use as a Coat Moisturizer, coat shine-enhancing polish, or as a nourish treatment for the mane and tail. When spray applied to the coat, it absorbs into the hair shortly. Best results come paired with a clean horse and a (relatively) regular bath/rinse routine. The formula can be applied to the coat, dry or wet, as a skin and hair treatment. **The moisturizer will purify and polish the coat at a particle level and special RH formula will rejuvenate your horse, soften the hair, add crucial nutrients, regenerate hair affected by damage caused from environmental hazards like UV and free radicals, and leave your horse with an otherworldly, nourished polish.** In warmer weather, protect your horse's comfort and top your application off with a fly spray. Use long term for out-of-this-world results. Show ring ready, every day! Absolutely comfortable, always! Avoid spraying Strength and Shine onto the coat before dressing your horse in tack or avoid tack areas prior to tack assembly. Strength and Shine Coat Moisturizer may cause tack to slip out of position when applied directly before assembly.

If you have any comments about, questions, or concerns with your experience of your product(s), please contact me and I am happy to assist you. Enjoy your new *CLEAN and LUXURY* Reflexion Horse products!
