

Best Use Suggestions Letter: Coat Moisturizers

The trigger sprayer is ready to replace the bottle cap on your new RH bottle. Before use, make sure to twist open the nozzle valve or switch any locks that your trigger sprayer may have. Think about keeping your bottles out of the sun and heat. Store them in a shaded or temperature controlled area. Leaving them in the sun or exposing them to too much heat may damage the ingredients and make the formula less effective.

Application Suggestions:

All of our Coat Moisturizers use Guar Gum and are designed to separate into a thin foam and water after rest. Before using, give your bottle a good shake and watch Reflexion Horse luxury formula explode and transform, science-magic style, into a cloud-plush, nutrient polish. (Guar Gum stabilizes ingredients but some oil separation is normal; guar separation is normal. Guar should shake into the formula easily.) Application of Reflexion Horse products is generally safe but avoid spraying Coat Moisturizers directly into body openings like the eyes, nose, and ears.

Strength and Shine: use as a Coat Moisturizer, coat shine enhancing polish, or a growth aid for the mane and tail. When sprayed onto the coat it will absorb into the hair shortly. Best results come paired with a clean horse and a relatively regular bath/rinse routine. The formula can be spray applied onto the coat (dry or wet) as a skin and hair (shine enhancing) treatment. The moisturizer will purify and polish the coat biome and special RH formula will rejuvenate your horse, soften the hair, add crucial nutrients, add protection from concern environmental hazards like harmful UV damage and free radicals, and leave them with an otherworldly nourished polish. In warmer weather, protect your horse's comfort and top your application off with a fly spray. Use long term for out-of-this-world results for your horse and their coat. Show ring ready, every day! Absolutely comfortable, always! Avoid spraying Strength and Shine onto the coat before dressing your horse in tack or avoid tack areas prior to tack assembly.

Fly Spray: our Fly Spray contains three quickly absorbing moisturizers that do not cause build up. Use our Fly Spray as a Coat Moisturizer and potent bug repellent. Spray directly onto the coat. Our Fly Spray is a high-quality clarifier that works to balance your horse's coat biome over time and assist their natural defenses. RH creates a sanitary, animal hyper-hygienic environment for your horse making it easier for them to manage flies overall. Our unique bug repellent essential oil (EO) blend is concentrated for high effectiveness and is designed to keep bugs away. Application is safe on the mane and tail.

Hot tip! Both Coat Moisturizers utilize quick cleansing and clarifying technology similar to products like micellar water. Both formulas can be used to "cleanse" and tidy the coat of your horse quickly and effectively. The easiest method is to spray the formula directly onto the coat before any physical grooming. Once the formula dries, a body brush will reveal a silky hair polish and lift away dirt you were about tackle with specialized grooming tools. (RH Coat Moisturizers can be rigorous on dirt but the stain removing properties of the Coat Moisturizers max out and do not account for extreme gunk like poop or any substances other than dirt).

If you have any comments about, questions, or concerns with your experience of your product(s), please contact me and I am happy to assist you. Enjoy your new *CLEAN* Reflexion Horse products!
